Claim Objections

1. Claim 2 recites "the predetermined time". There is insufficient antecedent basis for this limitation in the claim. The claimed "the predetermined time" is different from the claimed "a predetermined time period" in claim 1. The "predetermined time" refers to a specific time point while "predetermined time period" refers to a duration of time.

Allowable Subject Matter

2. Claims 3-6, 10-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The claimed limitation "a wireless telephone device with a memory that stores an additional message and an additional time period both of which corresponds to a predetermined telephone number. A selector selects one of said messages according to the measured time period" is considered as an allowable subject matter.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 7, 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al (US: 6084951), and in view of Lee et al (US: 6463297).

For claims 1, 8, Smith et al teach on Fig. 3 a wireless telephone with a display device.

Smith et al teach on column 5 line 60 timers.

Smith et al teach on column 1 line 32-37 identifying and displaying the caller's name and phone number by CLID.

Smith et al teach on Fig. 6 a memory storing a predetermined message.

Smith et al failed to teach "the call is cut off within the predetermined time period". However, Lee et al teach on column 2 line 34 to column 3 line 33 disconnect a call according to a predetermined time period by using a timer.

It would have been obvious to one skilled at the time the invention was made to modify Smith et al to have the "the call is cut off within the predetermined time period" as taught by Lee et al such that the modified system of Smith et al would be able to support the disconnecting a call according to a predetermined time period by using a timer to the system users.

Art Unit: 2645

Regarding claim 7, Smith et al teach on column 5 line 60 LCD.

4. Claims 2, 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al as stated in claim 1 above, and in view of Lee et al, Houde (US: 5905958).

Smith et al in view of Lee et al as stated in claim 1 above failed to teach "means for.....has passed". However, Houde teaches on column 12 line 3-5 IMS (intelligent mobile station) activates Do Not Disturb feature for a defined time period.

It would have been obvious to one skilled at the time the invention was made to modify Smith et al, Lee et al to have the "means for.....has passed" as taught by Houde such that the modified system of Smith et al, Lee et al would be able to support the time period for prohibiting answering to a call the system users.

Conclusion

- 5. The prior art made of record and not replied upon is considered pertinent to applicant's disclosure.
 - Toba (US: 6529747) teaches open/close-type portable telephone.
- 6. Any inquiry concerning this application and office action should be directed to the examiner Ming Chow whose telephone number is (703) 305-4817. The examiner can normally be reached on Monday through Friday from 8:30 am to 5 pm. If attempts to reach the examiner
